

Table S1. Experimental timelines. The 3-week intermittent access alcohol drinking (15% alcohol vs. water) and after 1-week abstinence (alcohol deprivation effect, ADE) with aticaprant, naltrexone, nor-BNI or their combinations.

A.

Weeks 1-3	Day 23
Intermittent access in two-bottle choice model (15% alcohol vs. water) with 24-h access every other day	Aticaprant alone or with naltrexone drinking test

B.

Weeks 1-3	Week 4	Day 27 or 28
Intermittent access in a two-bottle choice model (15% alcohol vs. water) with 24-h access every other day	1-week abstinence	Nor-BNI or Aticaprant alone or with naltrexone, ADE test

C.

Weeks 1-3	Week 4	Day 28
Intermittent access in a two-bottle choice model (15% alcohol vs. water) with 24-h access every other day	1-week abstinence 5 daily aticaprant with naltrexone	ADE test
